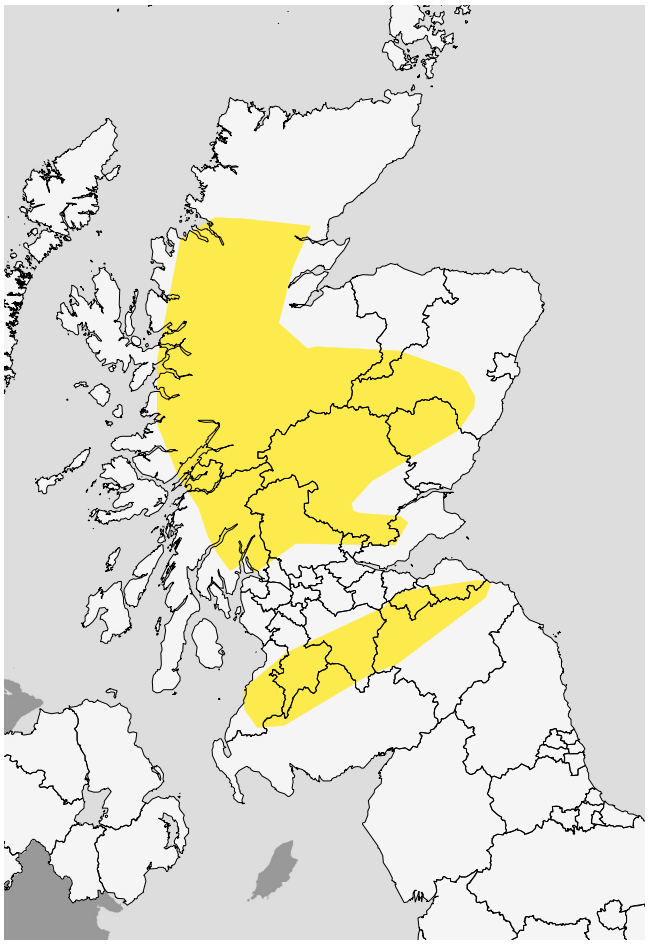
Yellow warning
Snow

Between
15:00 Sat 29 Feb 2020 and
12:00 Mon 2 Mar 2020



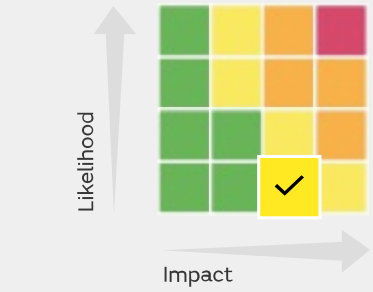
Persistent snow is likely over higher parts of Scotland leading to travel disruption.

What to expect

- Transport may be affected with longer journey times by road, bus and train services should higher routes become impassable.
- There is a small chance that vehicles and passengers could become stranded on the higher trunk routes north of the Central Belt of Scotland.

Further details

Rain and hill snow is expected to arrive from the south-west later on Saturday, the area gradually drifting northwards through Saturday night, Sunday and into Monday. In some places this will be accompanied by gales, which will generate blizzard conditions. The largest accumulations will be confined to above 400 metres, where 20-30 cm of snow could build up, but more temporary accumulations of 2-5, locally 10 cm are possible down to around 250 metres. Some uncertainty remains over precisely where the focus of the heaviest snow will be, and uncertainty also increases in the details of various areas of snow later into the weekend and early next week.



Very low likelihood of medium impacts

Issued at 10:47 Fri 28 Feb, 2020
